

Little Bones

A lot of little dogs won't take a bone for dental exercise but some will take a "Bone in Ribeye" bone.

The "wall" of the bone in ribeye bone is +1/8th" thick which is safe for Yorkies but NOT dogs over 15 lbs.

Any bones you give should be given under supervision at least at first.

The number one dog killer bone is the "pork chop bone". followed by goat and pork ribs.

*Bone-In
Beef
Ribeye*

**Small dogs
ONLY**

No cooked chicken nor any pork bone are "okay" for any dog.

"Baby Back Ribs" and pork bones aren't cool.

No!

No!

**Best Dog
Bone of All:
Knucklebone**
